Subject: Trial for BioGrow 365 Booster Plus

My name is Larry Favelo. I am the agronomist for Baker Farming. We are located in Fresno County, southwest of Firebaugh, California.

The main crops we grow are almonds, pistachios and wine grapes.

2 years ago I was approached by Randy and Elke Fornaciari with Farmers Future LP, marketing the product known as BioGrow 365 Booster Plus. It is a poultry based biological fertilizer.

I agreed to do a test block using BioGrow 365 BP on 60 acres of two year old trees. The total size of this almond block is 150 acres.

I applied BioGrow 365 BP in 3 applications at 3 gallons per acre on the dates of May 15th, July 15th and September 15th.

In the first year of treatment there was a very noticeable difference in the treated 60 acres over the untreated 90 acres, showing better tree growth, better leaf surface development and trunk diameter was also much better.

I treated the same 60 acres this past year in 2018 in 3 applications of 5 gallons per acre of BioGrow 365 BP on the same time frame dates.

These three year old trees were harvested in 2018.

Being this was the first harvest a better size of nut was noted over the untreated block. Wet weather at bloom and very cold weather after nut set definitely affected the crop, especially with bee pollination at bloom.

This year in 2019, I will apply 5 gallons per acre of BioGrow 365 BP in 3 applications for year 4 of these young almond trees.

I expect to report good production information with the use of this product.

Regards,

01-15-2019

Larry Favelo
